PPS starts working immediately after the treatment.

It penetrates entirely into the surface.

The particles enter inside the micro pores of the stone and expand via a chemical reaction and solidify.

This application closes all open pores of the stone.

-  **P.P.S. INHIBITS** the growth of mold and mildew.
-  **P.P.S. DEFENDS** against water and staining.
-  **P.P.S. GUARDS** against wear and tear.
-  **P.P.S. PROTECTS** from strong household cleaners.
-  **P.P.S. SEALED** at factory & never needs reapplication.

Your stone is an investment and should be treated accordingly. Common household items like oils, coffee, wine, ink, and even water can cause permanent damage to your stone if not protected by our exclusive PPS system.

Now, due to the innovative nanotechnology of the PPS system, our products are now resistant to attack from virtuously all staining agents and water damage.

When you buy Tumbled Marble from Cancos Tile, you can be sure you are receiving the top quality products, along with the best protection system around. Together, you can expect to enjoy your room for a long time.
